Ball Transfer Units

Product Overview

Ball Transfer Units make light work of shifting, rotating and directing unit loads. They have proven extremely valuable as integral parts of conveyor systems, feed devices, and machining and packaging equipment.

Applications

General-Purpose Machines

- Feed tables for sheet-metal working machines
- Fixtures for press brakes
- Feed devices for machining centers
- Drilling machine tables and motor-driven supporting tables
- Assembly aids in the manufacture of large engines and motors

Materials-Handling Systems

- Transfer ball tables, turntables and switches for sorting and distribution systems
- Crossover sections of continuous conveyors
- Baggage sorting systems at airports
- Transport of steel tubes and pipes
- Lifting platforms

Other Fields

- Construction of special-purpose machines
- Aerospace industry
- Nuclear reactors
- Beverage and stone-processing industries

Ball Transfer Units				
				
with sheet steel housing 0530-... <ul style="list-style-type: none"> • smallest ball transfer unit • for general applications with plastic load ball 0531-... <ul style="list-style-type: none"> • suitable particularly for transporting sensitive materials such as glass, polished aluminum, brass and steel sheets 	spring-loaded 0532-... <ul style="list-style-type: none"> • supported on springs and mounted under preload in a housing • Ball Transfer Unit recedes into its housing when overloaded 	with steel housing 0533-... <ul style="list-style-type: none"> • solid steel housing • without felt seal • very smooth movement 	with steel housing 0533-... <ul style="list-style-type: none"> • solid steel housing and cover • for very high loads 	with steel housing 0533-... <ul style="list-style-type: none"> • solid steel housing • for heavy loads

► Easy mounting and extraction

► Types for all standard applications and for many special solutions

► Precise rolling and full load-bearing capability in any mounting orientation

► Smooth running

► Conveying speed up to 2 m/sec in all types

► High rationalization effect

► Consistently high quality

Ball Transfer Units

without housing 0534-...

- low space requirement
- simple mounting
- mounting via holes in the collar

with sheet steel housing 0535-...

- reinforced housing and cover
- for heavy impact loads

with spring clip 0536-...

- easily mountable and extractable from the load side. Fixing is by means of spring clips, which permit generous tolerances in the mounting hole
- reinforced cover to withstand heavy impact loads

with plastic housing 0530-005-20

- for special applications

with plastic housing 0535-003-10

- especially suited for overhead installation
- ball recedes totally into housing

Ball Transfer Units Technical Data

Structural design of the Ball Transfer Units

Ball Transfer Units have a steel housing incorporating a hardened ball cup.

The latter serves as a raceway for a multitude of small supporting balls.

The supporting balls roll against the ball cup when the load ball turns.

Ball Transfer Units are designed so that precise rolling and full load-bearing capability are ensured in any mounting orientation.

Ball Transfer Units require little maintenance, and almost every type is protected against dirt by an oil-soaked felt seal.

Ball Transfer Units in corrosion- preventive design

Corrosion, caused by moisture or chemical attack, can lead to impaired functioning or even failure of the Ball Transfer Units.

Coated (galvanized + chromated) surfaces similar to DIN 50902 and DIN 50961 and/or higher-grade materials offer enhanced anticorrosion protection.

Galvanized covers and housings

offer simple protection against corrosion. In this type, the supporting balls and load balls are made from standard antifriction

bearing steel and are protected from corrosive attack by the lubricant.

Galvanized internals, corrosion- resistant steel balls

Consistent coating of all internals and the use of corrosion-resistant steels for the antifriction bearing elements, similar to

ISO 683-17, ensures comprehensive corrosion protection such as specified in ASTM B117-97.

All parts made from rust and acid resistant steel

(Antifriction bearing steel to EN 10 088)

This type is selected if the conveyed articles are abrasive and/or there is exposure to an aggressive environment, especially to chemicals.

Since all versions have been designed to meet the high standards of ISO 281, even this type is unsuitable for underwater use.

Mounting possibilities

Application example

Ball Transfer Units used for assembling
ball rail system runner blocks

Ball Transfer Units

Technical Data

Arrangement of the Ball Transfer Units

How the Ball Transfer Units should be arranged depends on the undersurface of the conveyed article. For articles with a uniform, smooth undersurface, such as boxes and cases, the distance between the Ball Transfer Units is calculated simply by dividing the smallest edge length by 2.5.

Example:

Undersurface of the conveyed article
= 500 x 1000 mm

Distance between Ball Transfer Units

$$a = \frac{500 \text{ mm}}{2.5} = 200 \text{ mm}$$

Determining the load for Ball Transfer Units

To determine the load for a Ball Transfer Unit, the mass of the conveyed article is divided by 3.

If the load ball height tolerances are well-correlated, it is possible, depending on the nature of the conveyed article, to also perform the calculation based on the number of load-bearing Ball Transfer Units.

Example:

Mass = 3000 N

Ball Transfer Unit load

$$F = \frac{3000 \text{ N}}{3} = 1000 \text{ N}$$

Spring-loaded Ball Transfer Units

The figures in the column headed "Preload" are most important when choosing the size for these types. The mass of the conveyed article is divided in this case by the number of load-bearing Ball Transfer Units.

Conveying speed

$$V_{\max} = 2 \text{ m/sec}$$

Load capacity

The stated load capacities apply to all mounting orientations and relate to 10^6 rotations of the load ball. In case of prolonged periods of use at speeds above 1 m/sec, an increase in temperature and reduced nominal life must be expected as a function of the load, especially for sizes 60 to 90.

Calculation of the nominal life

$$L = \left(\frac{C}{F} \right)^3 \cdot 10^6$$

L = Nominal life (rotations)
C = Load capacity [N]
F = Load [N]

Friction coefficients

The diagram shows the friction coefficients of Ball Transfer Units as a function of load and speed. These guideline values apply to any mounting orientation for rolling contact on a hardened steel plate.

Operating temperature

Ball Transfer Unit with steel load ball:

up to 100 °C.

At temperatures above 100 °C, only non-galvanized load balls without a felt seal should be used.

Make allowance for reduction in load capacity.

Use high-temperature lubricant!
Observe the manufacturer's instructions!

The existing lube oil may have to be washed out.

Ball Transfer Unit with plastic load ball:

up to 30 °C.

At temperatures above 30 °C, make allowance for reduction in load capacity.

Temperature factor

for steel load ball:

Temperature °C	Temperature factor f_T
125	0.9
150	0.8
175	0.7
200	0.5

for plastic load ball:

Temperature °C	Temperature factor f_T
40	0.9
50	0.8
60	0.7
80	0.5

The load capacity must be multiplied by the temperature factor.

Lubrication

The lubrication must be adapted to the conveyed articles and to the ambient conditions. The lubricant (oil) can be introduced via the load ball.

¹⁾ Minimum nominal thickness of mounting base

²⁾ With holes in base for dirt discharge

Ball Transfer Units with Plastic Housing

0530 – ...

- for lightweight ball transfer tables

Part number	Execution	Dimensions [mm]				Load capacity C [N]	Mass [kg]
		d _w	D	h	H		
0530-005-20	Mounting with quarter-turn fastener	15	42	2	32	500	0.045

Ball Transfer Units with Plastic Housing

0530 – ...

- especially suited for overhead installation
- ball recedes totally into housing

Part number	Execution	Dimensions [mm]				Load capacity C [N]	Mass [kg]
		d _w	D	h	H		
0530-003-10	Height-adjustable, mounting with threaded bushing	30	54	5	46	2500	0.264

Ball Transfer Units

Tolerance Ring / Mounting Tools

Tolerance Ring

0810 – ...

Ball Transfer Unit Part numbers				Dimensions [mm] D	Tolerance ring Part numbers	Mounting dimensions [mm] D ₁ b	
0530-.15-..	0531-.15-..	—	0535-.15-..	24	0810-024-03	25.7 + 0.20	7.1 ^{+0.2}
